

ENVIRONMENTAL POLICY

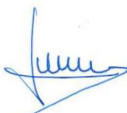

The management of the ACP Plant, dedicated to the production and design of potentiometers in carbon and ceramic technologies with their accessories, **is committed** to the preservation and protection of the environment, sustainability and the fight against climate change. This commitment is considered a **strategic factor** for continuously improving both the organization and facilities of the plant and achieving the objectives set out in this policy.

The ACP Management is committed to developing the business in a responsible manner and in compliance with safety, health, and environmental legislation.

The ACP management promotes the development of safe and environmentally **friendly products, seeking to minimize the environmental impact** derived from our activity and contributing to sustainability and the fight against climate change.

This commitment is based on the basic principles defined by the management and are defined as follows:

- Use of **sustainable** business practices to **minimize energy and water consumption**, environmental emissions, and waste generation, and thereby contribute to the fight against climate change.
- **Objectives** established to achieve continuous improvement in safety, health, and the environment.
- **Collaboration** with our customers, suppliers, contractors, personnel, and partners to promote environmental excellence.
- **Development of products that minimize** impact on the environment.
- **Sustainability**, which implies the search for a balance between profitability, social development and the reduction of adverse environmental impacts, with maximum **respect and support** for the communities in which we work and live.
